

SUPER MAGENTA DROP IN WELDING LENSES

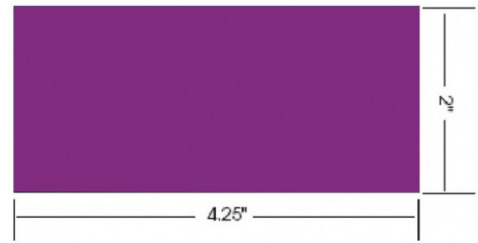

MODEL: WLD-SMD

WLD-SMD-WFL
(Large Lens)

WLD-SMD-WFC
(Circular Lens)

WLD-SMD-WFS
(Small Lens)

DESCRIPTION

When welding, the bright flare caused by the arc or flux can interfere with your view of the work.

Our acrylic Super Magenta lenses offer excellent flare reduction, while enhancing the color and visual clarity of your work. They have the same optical characteristics as a glass lens. These are drop-in lenses and need to be used along with your standard welding shade. For a view like with the old AO Cool Weld, use the Super Magenta lens along with one of our Gold-Mirrored Welding Lenses.

The advanced material used to make our lenses erases the arc and flare and enhances your vision. The resulting view is outstanding, letting you work better and faster. Simply drop the Super Magenta lens in behind your current standard shade and cover lens. It can also be used with an auto darkening hood in the cheater holder.

FEATURES

- Erases Arc and Flare
- Blocks UV
- Enhances Your Vision
- Can Be Used With Any Shade

SPECS

- Large Lens: 4½" x 5¼"
- Circular Lens: 50 mm
- Small Lens: 2" x 4¼"
